

Problem Statement: Automated Tech News and MNC Hiring Updates Agent using n8n

Objective

Design and implement an automated agent using n8n that collects the latest technology-related information and MNC hiring opportunities from reliable online sources and delivers them to a Telegram bot channel/group every morning.

Problem Description

Professionals and students often spend significant time searching multiple websites, job portals, and news platforms to stay updated with technology trends and hiring opportunities. The process is repetitive and time-consuming. An automated workflow is required to gather, filter, and distribute relevant information efficiently.

Proposed Solution

Use n8n to create a workflow that: Collects technology news from selected sources. Collects MNC hiring and job opening information. Filters duplicate or irrelevant content. Formats the collected data into a readable summary. Sends the summary automatically to a Telegram bot every morning.

Functional Requirements Scheduled execution every morning. Integration with news APIs, RSS feeds, or job portals. Automatic content filtering and categorization. Telegram bot integration for message delivery. Error handling and workflow monitoring. **Expected Output** Daily technology news updates. Daily MNC hiring and recruitment updates. Organized message delivered through Telegram. **Benefits** Saves time. Provides centralized information delivery. Improves awareness of industry trends and job opportunities. Fully automated and scalable solution. **Technology Stack** n8n Telegram Bot API News APIs / RSS Feeds Job portals and company career pages Cloud or local n8n deployment
